**HIGH CARBON, HIGH CHROME (HCHC)** alloy tool steel offers twice the blade life of standard inlaid carbon alloy tool steel. This HCHC quality is often used for lower knives on three knife trimming machines.

**INLAID HIGH SPEED STEEL (HSS)** is manufactured from the traditional two piece composite knife blanks. They contain 18% tungsten (SKH-2) at RC 62-63, which is designed to improve the blade life as much as five times that of the standard inlaid carbon alloy tool steel. This "high-tech" alloy is designed to be used under high production applications to ensure an increased number of cuts between sharpenings, thereby reducing cost per cutting hour.

**We have also excellent prices for McCain, Macey, Challenge, Kolbus, and Lawson Knives**

*The above listed prices are subject to change without notification.*
